**Tallahassee Garden Club** Caladium Bulbs (tubers) are grown in Lake Placid Florida, the Caladium Capital of the world. The bulbs offered through Tallahassee Garden Club are #1 size  $(1^{1}/_{2}^{"}-2^{1}/_{2}^{"})$  and come to you fresh from the farm in Lake Placid, Florida.

**General Information:** Caladiums are tropical hot weather summer foliage plants in the Araceae family, Aroideae subfamily, genus Caladium. Caladiums perform best in shade. Many varieties are sun tolerant, although they prefer morning sun rather than hot afternoon sun. The leaf is classified as either "Fancy" (large) or "Strap" (narrow). Fancy-leaf Caladium stems are attached within the blade of the leaf while the strap-leaf variety stem is at or near the edge of the leaf. In general, Fancy leaf Caladiums are less sun tolerant, develop faster, are less cold tolerant, are taller and more upright and last shorter periods in the landscape. Strap leaf Caladiums have elongated, narrow shaped leaves, are smaller, shorter, spread more, and are less upright.

**Growing Instructions:** Plant 6-12 inches apart, 3-5 inches deep (cover tubers with 1-2 inches of soil) when soil temperatures reach 70 degrees. Water frequently, keeping soil moist but not saturated. Plants can be fertilized with a soluble fertilizer to promote strong foliage growth. Fertilization is not necessary if planted in well-prepared beds. Bulbs may be planted in borders, in mass or in containers and hanging baskets.

Bulbs (tubers) may be over-wintered by digging up and storing. Dig bulbs before all leaves have lost their color. Dry for a week, and then remove dried foliage and dirt and store in peat moss or vermiculite. Bulbs should be stored where temperatures do not go below 50 degrees.
